

SHIFTING THE LIMITS

FRONIUS PRIMO

/ The communicative inverter for optimised energy management

/ The Fronius Primo is perfectly suited to use in smaller photovoltaic systems. The intelligent energy management function makes it possible for the majority of the photovoltaic energy to be consumed in your own home, dramatically reducing energy costs in the process. Furthermore, the Fronius Primo is exceptionally communicative. With WLAN integrated as standard, the most interesting system data can be accessed online at any time - either from a PC via the online portal or by using the app while on the go.

INTELLIGENT PV ENERGY CONSUMPTION

- / Use the majority of the PV energy yourself
- / Dramatically reduce household costs
- / Reduce dependency on the power supply companies

ACCESS SYSTEM DATA

- / Fronius Solar.web: free visualisation of system data
- / WLAN and Ethernet: integrated as standard

MODERNISE OLD SYSTEMS

- / Replace faulty inverters and increase the PV yield
- / Bring existing systems up to date with the latest technological standards
